DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 1/14/02; 4/12/02; 8/1/02; 11/21/03; 2/25/04; 5/17/04; 9/23/04 have been considered by the examiner.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Houser et al. (6,361,559). Houser et al. disclose an anastomosis device as claimed and suggest the device carry drug. Although, Houser et al. do not disclose the anastomosis device comprising the polymeric matrix and therapeutic as claimed. It is known in the art to have a polymeric matrix for carrying therapeutic agent as claimed. The polymeric matrix including poly ethylene-co-vinylacetate or polybutylmethacrylate or polyfluoro copolymer is well known for carrying drug and/or as a diffusion barrier. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ the polymeric matrix and therapeutic as claimed onto Houser et al.'s device in order to effectively deliver the drug for treating and healing or preventing restenosis.

Although, the prior arts do not disclose the specific percentages as claimed, it is well known in the art to make a copolymer out of various percentages by weight in order to provide a polymer matrix with a desire property/characteristic. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to varying the property/characteristic of the polymeric matrix by varying the percentages by weight of each residue in order to maximize the property/characteristic of polymeric matrix for use in certain application.

Prior art support the well known statement:

Ding et al. (5,837,313) disclose a stent coated with polymeric matrix including plurality of layers and containing the biologically active agent (col. 8, line 37-46, col. 10, lines 1-10) and ethylene vinyl acetate copolymers being used in the polymeric matrix.

Baker et al. (3,923,939) and Zaffaroni (3,921,636) disclose a polymer matrix such as ethylene/vinylacetate copolymer, polybutylmethacrylate and other polymer for carrying drugs.
